Lab: Automate a Price Range Slider

Objective

Write a Playwright test that moves a price range slider from its default values to **$100 - $300** using only keyboard actions and verifies the final result.

Application URL: https://sdetqa.vercel.app/autoplay

Assignment Requirements

Complete the following tasks one by one.

Task 1: Open the Application

- Launch the browser.
- Navigate to the slider demo page.

Task 2: Locate Required Elements

Identify the following elements using Playwright locators:

- Minimum slider handle
- Maximum slider handle
- Price range textbox

Task 3: Reset the Slider

Before performing any action, reset the slider to its default values.

Requirements

- Move the minimum slider to **$0** using the keyboard.
- Move the maximum slider to **$500** using the keyboard.

Hint

- Focus the slider first.
- Use appropriate keyboard shortcut keys.

Task 4: Move the Minimum Slider

Move the minimum slider until it reaches **$100**.

Requirements

- Read the current price range from the textbox.
- Extract only the minimum price.
- Stop moving the slider once it reaches **$100**.
- Do not move the slider unnecessarily after reaching the target.

Task 5: Move the Maximum Slider

Move the maximum slider until it reaches **$300**.

Requirements

- Read the updated price range.
- Extract only the maximum price.
- Stop moving once the value becomes **$300**.

Task 6: Verify the Result

Verify that the textbox displays:

```
$100 - $300
```

Use Playwright assertion.

Expected Output

At the end of the test, the price textbox should display:

```
$100 - $300
```

Bonus Challenge

Complete the assignment without changing the main logic, then try the following enhancements:

1. Store the target prices ($100 and $300) in variables.

2. Print the current price after every slider movement using console.log().
3. Count how many key presses were required to reach the target values.
4. Convert the repeated slider movement logic into a reusable function.
5. Make the test work for any target price range (for example, $50 - $450 or $150 - $350) by passing values as parameters.
