Lab Exercise

Automating Auto-Suggest Dropdown in Flipkart

Objective

Automate the handling of an **Auto-Suggest Dropdown** in Flipkart by searching for a product, capturing all suggestions, printing them, selecting a specific suggestion, and validating the results using assertions.

Steps

1. Open Flipkart Website

- Launch the browser.
- Navigate to **https://www.flipkart.com/**.
- Close the login popup if it appears.

2. Search for a Product

- Locate the search box.
- Verify that the search box is visible.
- Enter **"smart"** into the search field.

3. Handle Auto-Suggest Dropdown

- Wait until the auto-suggestion list is displayed.
- Capture all the suggestion elements.
- Verify that at least one suggestion is displayed.
- Print the total number of suggestions.
- Print the **5th suggestion** (if available).
- Print all suggestions one by one in the terminal.

4. Select a Specific Suggestion

- Loop through all the suggestions.
- Search for the suggestion **"smartphone"**.
- Click the **"smartphone"** suggestion when it is found.

5. Validate the Selection

- Verify that the **"smartphone"** suggestion was successfully found and selected.
- Verify that the current URL contains **"smartphone"**.
- Verify that the search box value is updated to **"smartphone"**.
