Test Case: Bootstrap Hidden Dropdown (OrangeHRM)

Precondition

Application: URL: https://opensource-demo.orangehrmlive.com/

- Application URL should be accessible
- Valid login credentials available

Test Steps & Expected Results

S.No	Steps	Expected Result
1	Open the browser and navigate to OrangeHRM Demo Application	Login page should be displayed
2	Enter username as **Admin**	Username should be entered successfully
3	Enter password as **admin123**	Password should be entered successfully
4	Click on **Login** button	User should be logged in and dashboard should be displayed
5	Click on **PIM** menu	PIM page should be opened
6	Click on **Job Title dropdown** (hidden/bootstrap dropdown)	Dropdown options should be displayed
7	Capture all dropdown options	All options should be identified successfully
8	Count number of options	Total number of options should be printed in console
9	Get text of all options	All dropdown option texts should be printed in console
10	Iterate through options	Each option text should be printed one by one
11	Find option **"Automaton Tester"**	Matching option should be identified

S.No	Steps	Expected Result
12	Click on **"Automaton Tester"**	Selected option should be chosen in dropdown
13	Wait for few seconds	Selected value should remain visible (for observation)

Note:

- This is a **custom dropdown (not normal select)** → so we use click() instead of selectOption()
