Dynamic Web Table Test Cases

Application Used: Auto Play URL: https://sdetqa.vercel.app/autoplay.html

---

Test Case 1: Chrome CPU Load Validation

Objective: Verify Chrome CPU load in the table matches the value in the red label

Test Steps:

1. Verify the page loads successfully.
2. Verify the task table is displayed.
3. Verify table contains multiple rows.
4. Verify each row has process name column.
5. Identify the row where process name = **Chrome**.
6. Extract CPU load value (should contain %).
7. Verify CPU load value is not empty.
8. Verify yellow label (strong.chrome-cpu) is visible.
9. Verify yellow label value matches the extracted CPU load.
10. Verify only one Chrome row exists (or handle multiple correctly).

Test Case 2: Firefox Memory Usage Validation

Objective: Verify Firefox memory usage in the table matches the value in the blue label

Test Steps:

1. Verify the page loads successfully.
2. Verify the table is present.
3. Identify the row where process name = **Firefox**.
4. Extract memory value ending with **MB**.
5. Verify extracted value matches pattern (e.g., \d+ MB).
6. Verify memory value is not empty.
7. Verify blue label (strong.firefox-memory) is visible.
8. Compare extracted memory with label value.
9. Validate case sensitivity of process name (Firefox vs firefox).

Test Case 3: : Chrome Network Speed Validation

Objective: Verify Chrome network speed in the table matches the value in the orange label

Test Steps:

1. Verify table is loaded.
2. Find row with process name = **Chrome**.
3. Extract network speed value (should contain Mbps).
4. Verify value format (e.g., \d+ Mbps).
5. Ensure extracted value is not empty.
6. Verify orange label (strong.chrome-network) is visible.
7. Compare extracted value with label value.
8. Validate behavior if multiple "Mbps" values exist in row.

Test Case 4: Firefox Disk Space Validation

Objective: Verify Firefox disk usage in the table matches the value in the violet label

Test Steps:

1. Verify table is displayed.
2. Locate row with process name = **Firefox**.
3. Extract disk value containing MB/s.
4. Validate format (e.g., \d+ MB/s).
5. Ensure extracted value is not empty.
6. Verify violet label (strong.firefox-disk) is visible.
7. Compare extracted disk value with label.
8. Validate correct column is selected (not confused with memory).
